Hi all, just picked my 2003 model 100 series from Toyota after they checked out why my ABS warning light comes on at times. Been told that the computer is telling them it could be a faulty hydro boost pump being damaged by somebody replacing the brake fluid with the wrong stuff. Does anyone know what it is like to get the evaporator / valve out of a 100 series. It looks pretty full on under the glove box but not sure if you can actually get the thing out without removing everything, can you just remove the ECU and a couple of other things and then undo the nuts and screws that hold the assembly to the firewall or do you really need to pull out the dashpad and ...
