See more than you ever thought possible with our advanced line of differential scanning calorimetry (DSC) solutions. Whether you're performing QA/QC applications, studying processes in polymers or pharmaceuticals, or developing the cures of tomorrow, our new DSC platforms will open your eyes to a world of exciting new opportunities. PerkinElmer DSC 7 The PerkinElmer DSC-7 Differential Scanning Calorimeter permits the direct calorimetric measurement, characterization and analysis of thermal properties of materials. Buy and sell PerkinElmer DSC 7 Instruments at LabX in online auctions and classified ads. This double-furnace, power compensation DSC 8000 has been redesigned with you in mind. We've improved everything from the furnace design and the lights that illuminate them to the autosampler - giving you fast and reliable results easier than ever before. StepScan DSC is a temperature modulated, DSC technique that operates in conjunction, with the Power Compensation Diamond, DSC from PerkinElmer. The approach, applies a series of short interval heating, and isothermal hold steps to cover the temperature range of interest. The Pyris 1 DSC was installed in our lab with the factory default software version 3.7 and then upgraded to version 3.72 using a single floppy installation disk. 1.3 Connecting the peripheral gases. Our DSC uses two types of gases during operation. Nitrogen gas is used as shield gas and is also supplied to the cryofill. Helium
